

LEATHER FOAM CLEANER

Multi-industry. The ideal solution for use in the automotive/transport, [cars, limos, coaches], marine, aviation and furniture industries.

Ready, easy & safe to use. Professional pH neutral detergent foam for the safe and effective cleaning of leather upholstery and trim.

Systemized. Zirconite Leather Foam Cleaner is designed to safely remove dirt, food or drink spillages from leather trim without removing the Zirconite Leather Shield Protective Coating.

Leather fragrance & natural finish: Zirconite Leather Foam gives a natural sheen to cleaned surfaces, and re-emphasises a natural leather scent.

Directions for Use:

NB. Do not use on suede or similar finishes. Always test first on an inconspicuous area to ensure that the leather is colourfast and water-resistant. Old faded/unsealed leather may be adversely affected and should not be treated with this product.

Foaming action.

Using the pump dispenser apply Leather Foam onto the surface.

For vertical surfaces such as seating uprights/backs, apply the foam at the top of the seat, and allow the foam to travel down, whilst gently agitating with a clean micro-fibre or cotton cloth.

DO NOT ALLOW CLEANER TO DRY ON LEATHER SURFACES.

Leave cleaner to act for up to 2 minutes, and then remove any foam cleaner residues with a damp (NOT WET) clean cloth, frequently rinsing out the cloth with fresh water.

Finally, use a dry cloth to remove any moisture. Leather surface should be completely dry to touch on completion of cleaning process.

Higher Gloss finish.

For customers wanting a glossier finish to the leather trim, Concept Leather Care Crème can be applied to the cleaned leather surface once it is dry.

Concept Leather Care Crème will also replenish natural oils to the leather which are lost over time, to ensure the leather remains soft and flexible, and thereby preventing drying out/cracking.
